Registers (Assembly | Register#):

Zero	R0	A0	R1	A1	R2	A2	R3
A3/RV	R4	T0	R5	T1	R6	S0	R7
S1	R8	S2	R9	--	R10	--	R11
--	R12	FP	R13	SP	R14	RA	R15

Pseudo-Instructions (Assembly | Equivalent Instruction):

NOT Ri,Rj	NAND Ri,Rj,Rj	CALL Imm(Ri)	JAL RA,Imm(Ri)
RET	JAL R10,0(RA)	JMP Imm(Ri)	JAL R10,Imm(Ri)
BGT Ry,Rx,Label	BLT Rx,Ry,Label	BGE Ry,Rx,Label	BLE Rx,Ry,Label
BR Label	BEQ Zero,Zero,Label	GT Rz,Ry,Rx	LT Rz,Rx,Ry
GE Rz,Ry,Rx	LE Rz,Rx,Ry	SUBI Ry,Rx,Imm	ADDI Ry,Rx,–Imm

Other notes:
Memory addressability: Byte address
Instruction size: 4 Bytes (i.e., PC will be incremented by 4)
The data size for Load/Store: 4 Bytes
Data width for register file: 4 Bytes
Shift operations are arithmetic: (i.e. only RSHF needs sign extension)

I/O:

Clock (CLK), Reset signals

Memory mapped IO
ADDRLEDR: Memory Addr for LEDR: 0xFFFFF020
ADDRHEX: Memory Addr for HEX : 0xFFFFF000
ADDRKEY: Memory Addr for KEY : 0xFFFFF080
ADDRSW: Memory Addr for switch: 0xFFFFF090

Microarchitecture specifications:
Instruction memory: imem
Data memory: dmem
Start PC: 0x100
